

The World's most advanced non-invasive, skin tightening, rejuvenating plasma device on the market.

The Plasma Pen is designed to dramatically **reduce Fine Lines and Wrinkles, Repair & Lift Skin** as well as **Rejuvenate your complexion for Firmer, Plumper more Youthful looking skin**. The Plasma Pen **Improves Laxity & Texture, Significantly Tightening Loose Sagging Skin**. It effectively reduces the appearance of **Scars, Acne and Thread Veins**.

The state of the art **Plasma Pen** forces the skin tissue to contract virtually immediately by thermally disrupting the skin as well as fibroblasts. This micro-trauma **stimulates new collagen** (neocollagenesis) and helps release and activate essential proteins and growth factors like cytokines and fibroblasts, which makes more collagen than before it was disrupted. Eventually, excess skin dries off to form tiny crusts that fall off like dandruff in just a few days. New collagen is formed over a period of up to 90 days. Results are immediate and can be seen after just one treatment. The treatment is suitable for both men and women, the **results are Long-lasting** and can last up to **3 years**.

Advantages of the Plasma Pen:

The effects achieved by this treatment are comparable to that of surgery but it has many advantages over such invasive methods:

- *Non - surgical treatment
- *No injectables / general anaesthetic required
- *No need for costly, invasive surgery
- *No scalpels, stitches, cutting of the skin or scarring
- *Short downtime, quick and easy procedure with rapid recovery
- *The treatment is pain free - occasionally you may feel a tingling sensation.
- *Simply aftercare instructions

If you wish to discuss the treatment further or put together a treatment / price plan, please call the salon to book a **FREE** consultation with our Fibroblast specialist.
